Objective:

1. Develop a user-friendly ("dummy-proof") POS system designed for use by small businesses ranging from Convenience, Liquor stores to Pizzerias, and Take-Out Restaurants.
2. POS system to be modeled on the G-Tech Altura Terminal (Lotto machine), for layout, ease of use, and hardware durability.
3. Software must be **Java based** and designed to run on a **Linux operating system** (Similar to G-Tech Lottery software).
4. Software designed to be subscription based, with ability to cut off software access to non-paying/delinquent subscribers. However, all customer data to stay solely on customer's local hardware (computer/server) and customer still able to retain raw data albeit in spreadsheet form.

Desired Software Features:

1. Must own Source code and ownership and development rights
2. Software needs to be designed for primary use via a touch-screen interface, in addition to keyboard & mouse functionality
3. All features should be optional to allow user to customize to their needs
4. Home screen with customizable hot keys (for touch screen & keyboard)
   a. On-screen manual cash register to manually key in prices
   b. Optional Receipt mode
   c. Ability to suspend & resume multiple transactions
   d. Void, refund, credit/ Exchange Option.
   e. Payment options (Cash, Credit, EBT, WIC, combination)
   f. Deli/Kitchen button to take to "order screen" to place food orders
5. Inventory
   a. Ability for unlimited Categories, Sub-Categories, Sub-Sub-Categories, etc.
   b. Ability to track Overall Product Movements and Product Movements by Category
   c. Ability to track Product Movements by date & time of day
   d. Ability to View Sales Activity by day, date, time of day, shift, etc.
   e. Needs Lottery Instant Ticket (Scratch-Off) Inventory feature
   f. Reminder Option to remind employee to place certain orders on certain days at a certain time
   g. Reminder to reorder or check stock for certain item if certain preset quantity sold or remaining
   h. Reminder to Return merchandise to Certain Vendors on a given day and/or time
   i. Assign products to single or multiple suppliers
   j. Ability to show which products are available from each supplier
   k. Ability to enter Primary, Secondary, Tertiary suppliers for items
   l. Ability to do product inventory by supplier
   m. Ability for custom/automatic price mark-ups for products by category, sub-category, etc
   n. Ability to enter modifiers for deli/restaurant products
6. Financial
   a. Sales breakdowns by Payment method (ie. Cash, Credit/Debit, EBT/Food Stamps, WIC, etc)

b. Sales Activity breakdowns by product category, day, date, time, shift, etc.
c. Feature for Customer Credit
d. Feature for money owed to Supplier
e. Payout option (Payout money from cash register to Customer, Supplier, etc.)
f. Ability to enter and/or update Sales tax by Zip Code (needs to be connected to internet)
g. Needs Balance and Totaling feature to show expenses sales, and/or payouts by day and shift
h. Employee Time clock feature to track hours worked, etc.
i. Ability to view and track returns, voids, manually entered prices by date, time, day, shift, employee, etc.

7. Kitchen Display System
   a. Ability to enter food orders on POS terminal and view orders on screen in kitchen/prep area
   b. Ability to print a receipt for an entire order and print separate labels per food item with order number, item name, barcode, and price of item

Hardware:

The POS system will be utilizing the following hardware…

1. Touch-Screen Monitor/Computer CPU
2. All Hard drives **must be Solid State** including Servers if applicable
3. Use of Small, Mini Solid State Servers
4. Equipment (ex. Computers or Hard drives) with fans are to be avoided as much as possible seeing as equipment having fans are more likely to breakdown
5. Programmable Keyboard with mouse
6. Thermal Receipt Printer
7. Thermal Label Printer
8. Barcode Scanner Gun
9. Barcode Scanner with Scale Combination
10. Deli Scale
